

# The UFO Series

## A Preliminary Overview

---

The UFO series of loudspeakers is unique in many ways.

**Its primary function is to pair with a solid screen** (such as a flat screen TV) to provide the perception of the sound coming, not from the loudspeaker, but from the screen itself.

This is important for **delivering a real cinema experience** to the audience. A fundamental criterion of this “suspension of disbelief” is a coherence between the sound and the image.

The UFO series can be **used either as Left, Centre, Right channels, or Centre only** with the Left and Right channels being played back through more conventional loudspeakers such as the Audio Excellence Vertex series.

UFOs can also be used in combination with surround, subwoofer and bass-extension loudspeakers from our Vertex and Raijuu series.

### **The series comprises 3 loudspeakers:**

- The UFO 1 is the smallest model in the series, a passive loudspeaker, designed to match screens smaller than 100” diagonal.
- The UFO 2 is an intermediate model, an active loudspeaker, designed to match screens comprised between 100” and 150” diagonal.
- The UFO 3 is the most powerful model, an active loudspeaker, designed to match screens larger than 150” diagonal.

The UFO units are designed to be installed near to the screen - in front and above or below it.  
The units can either be fixed to the ceiling or sit on a coffee table in a similar way to a UST projector.

This brand-new series of limited-range loudspeakers, operating only above 100 Hz, should be coupled with bass-extension loudspeakers, such as the Audio Excellence Raijuu 1.
